```
int factorial(int n) {
                    if (n == 0) {
   return 1;
    Base case I
                     else {
                      return n * factorial(n - 1);
Recursive call I
```
