```c
#include <stdio.h>

int main(void) {
    char st[7 + 1];
    printf("Enter a string: \n");

    fgets(st, 3, stdin);
```

st is the array identifier and also a pointer to the first element in the array

we read 3 - 1 characters from the user and put an additional `\0`

stdin is a file defined in stdio.h library

```c
    printf("st is saved as: %s\n", st);
    return 0;
}
```
